

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: MindMesh

Project / Product Name: Meridian

Organization / Institution (if any): Ramaiah Institute of Technology, Bangalore

Submission Date: 30-09-2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes / No

Yes

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming : AI-assisted brainstorming and refinement of the project concept, conversational workflow, and implementation approaches.

Code generation or assistance : AI-assisted development across the frontend and backend. ChatGPT was used to formulate development prompts, Claude assisted with frontend implementation, and AI tools were also used for backend/API development.

UI / UX design : Claude was used for frontend development based on structured prompts prepared and refined using ChatGPT. The generated implementation was reviewed and adapted by the team to meet Meridian's requirements.

Content creation : AI assistance was used where required for project-related content, descriptions, and documentation.

Data analysis : Not a primary component of the project.

Testing / debugging : ChatGPT, Claude, Gemini, and GitHub Copilot were used to assist with debugging, troubleshooting, testing, and refinement of backend/API and application functionality.

Other : Google Gemini was used to assist in implementing Meridian's real-time voice assistance and interruption capabilities, enabling users to interrupt an ongoing AI response and provide a new instruction.

4. Feature Origin Classification (Please add/delete based on the number of the feature)

Feature 1

Feature Name: AI-Assisted Frontend Development

Origin: Both — Self-Generated + AI-Assisted

Description:

ChatGPT was used to develop and refine structured prompts for frontend implementation. These prompts were provided to Claude, which assisted in generating the frontend implementation for Meridian. The team reviewed, integrated, modified, and refined the generated output according to the project's functional requirements and user experience.

Feature 2

Feature Name: Real-Time Voice Assistance

Origin: Both — Self-Generated + AI-Assisted

Description:

Google Gemini was used to assist with the implementation of real-time voice interaction in Meridian. AI assistance was used for integrating the voice-based interaction flow and handling model responses. The team integrated the functionality into the application and adapted the implementation to fit Meridian's real-time conversational workflow.

Feature 3

Feature Name: Real-Time Interruption Handling

Origin: Both — Self-Generated + AI-Assisted

Description:

Google Gemini was used to assist in implementing the interruption mechanism that allows a user to interrupt an ongoing AI response and provide a new instruction. The team integrated and refined the implementation to support dynamic changes in user intent during an active conversation, making the interaction more responsive and user-driven.

Feature 4

Feature Name: Backend and API Integration

Origin: Both — Self-Generated + AI-Assisted

Description:

ChatGPT, Claude, Gemini, and GitHub Copilot were used by the team for backend and API development. AI assistance was used to explore implementation approaches, generate and refine code, integrate APIs, and troubleshoot development issues. The team reviewed, modified, tested, and integrated the resulting code into Meridian.

Feature 5

Feature Name: Testing, Debugging and Refinement

Origin: Both — Self-Generated + AI-Assisted

Description:

ChatGPT, Claude, Gemini, and GitHub Copilot were used to assist with identifying bugs, analysing errors, suggesting fixes, and refining application behaviour. The team independently tested the suggested solutions, modified implementations where necessary, and validated the final functionality within Meridian.

Feature 6

Feature Name: Context-Aware Conversational Interaction

Origin: Both — Self-Generated + AI-Assisted

Description:

The team designed Meridian around the concept of dynamic, context-aware conversation, while AI tools were used to assist with implementation and refinement of the underlying interaction logic. The resulting system was adapted and tested by the team to ensure that updated user instructions could influence the ongoing interaction rather than being restricted to the initial request.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: Prathvi Shetty

Role: Team Lead

Signature: PrathviShetty

Date: 30-09-2026
